PROFESSIONAL SUMMARY

Software Engineering student passionate about building useful software and solving real-world problems through technology. Started with HTML, CSS, JavaScript, and PHP, and is now growing into full-stack development with React, Node.js, Express.js, and PostgreSQL. Experienced in building applications end-to-end, from database schema to frontend interface, with a focus on project-driven learning and practical software architecture.

EDUCATION

Software Engineering Student — Dire Dawa University

In progress

- Currently pursuing a Software Engineering degree
- **Focus areas:** Object-Oriented Programming, Database Systems, Web Development, Software Architecture, System Programming, System Security

TECHNICAL SKILLS

Languages	HTML, CSS, JavaScript, PHP (comfortable) • Dart, C++, CMake
Currently Learning	React, Node.js, Express.js, PostgreSQL
Mobile	Flutter, Dart (80.8% of the Local Service app codebase)
Backend & Data	REST APIs, JWT authentication, bcrypt, Prisma, PostgreSQL / SQLite
Frontend	React, Tailwind CSS, responsive web interfaces

INDEPENDENT FULL-STACK DEVELOPMENT

- Learn by building projects end-to-end: designing architecture, building the database schema, writing the backend API, creating the frontend interface, and shipping the result
- **LostLink** is the largest example of this project-based learning, alongside smaller systems such as hospital, dormitory, and e-commerce applications
- Practice different parts of the stack through a variety of project types

PROJECTS

LostLink — Full-Stack Lost & Found Platform

Tech: React, Tailwind CSS, Node.js, Express.js, Prisma, PostgreSQL/SQLite, JWT, bcrypt

- Full-stack platform for reporting, discovering, and recovering lost items
- Features: user registration and authentication, item reporting, search and filtering, messaging between users, REST API
- Secured with JWT authentication and bcrypt password storage

GitHub: github.com/abel7107/myrealworldproject

Coffee Shop — Full-Stack Ordering System

Tech: React, Node.js, Express.js, PostgreSQL

- Ordering and management system for tracking orders, inventory, and customer preferences
- Features: menu management, order placement and tracking, inventory tracking, customer accounts, payment integration

Hospital Management System

Tech: JavaScript, HTML, CSS

- System for managing patients, doctors, appointments, medical records, and billing

E-Commerce Application

Tech: PHP, CSS, JavaScript

- Web application featuring products, collections, checkout, and order functionality

Local Service Mobile Application

Tech: Flutter, Dart, C++, CMake

- Service-discovery concept connecting users with local service providers
- Built primarily in Dart (80.8% of the codebase)

EXPERIENCE & LEARNING

Software Engineering Student — Dire Dawa University

- Coursework and practice in Software Engineering, Object-Oriented Programming, Database Systems, Web Development, Software Architecture, System Programming, and System Security

Independent Full-Stack Development

- Outside the classroom, build projects end-to-end: architecture, database schema, backend API, frontend interface, and delivery

COURSES

Software Engineering • Programming • Database Systems • Web Development • Software Architecture • Software Engineering Practices
